SampleServe

Established in 2001 as a sample collection agency, SampleServe has since evolved to become Michigan's leading supplier of digital field sample collection and reporting tools, offering innovative and easy to use Project Management, Field and Lap Applications and Report Generators.

Applications

Ground & Surface Water, Soil & Vapour, Wastewater, Asbestos, Food Safety, Drinking Water, Air etc.

Products

Project Management

The SampleServe platform begins with a simple to use web-based project management tool that is free to use. It saves Project Managers time on scheduling and communications, allowing all sampling details to be managed easily and effectively.

More information **available here.** https://www.sampleserve.com/products/project-management

Mobile Field App

The Mobile App allows the field technician to collect and transmit all relevant environmental data including GPS and photos, and it also prints **bar coded** and **QR coded sample bottle labels** in the field. The App saves time in the field, making sample collection more productive. Using SampleServe's web and mobile application saves the field sampling crew approx. 20% of their time compared to typical sample collection methods.

More information **available here**. https://www.sampleserve.com/products/field-app

Lab App

For the lab, the bar-coded labels coupled with digital chain of custody instructions, saves significant labour costs, eliminating any transcription errors.

More information **available here.** https://www.sampleserve.com/labapp

Report Generator

When laboratory analysis is complete, reports can be generated within seconds. Data Box Maps, Groundwater contour maps, iso-chemical contour maps, graphs and data tables can all be generated within seconds, at roughly 15% of the costs of traditional methods.

SampleServe

Case Studies

Stantec is a large international consulting firm with approximately 30,000 employees across the globe. Their Seattle office has been using the SampleServe platform for approximately 18-months and they have about 130-projects uploaded so far and add more weekly. Their projects mostly consist of BP Amoco projects and 7-Eleven projects.

Blarney Castle Oil Company has been using SampleServe to manage its portfolio of projects for several years now. They own about 140 gas stations and have about 35 projects that they currently utilize to manage their sampling and reporting.

MCE is a small consulting engineering company that has about 25 projects on the SampleServe platform. They use the platform for managing their active sampling projects and for preparing quarterly sampling reports and other types of investigation and progress reports.

SOS is a small lab that does environmental testing and municipal drinking water sampling. SOS has been working with SampleServe for 13 years and was the first customer of the Municipal Drinking Water Sampling App. They seem to be very pleased with its performance. They do about 6,000 municipal drinking water samples per year.

Milley Energy is an energy/oil company that has about 34 projects on the platform. Miller energy has claimed that we save them about 60% of their costs over what they were paying before.

SampleServe creates digital solutions to the sampling process. We save you time and money with our tools to handle any sampling project. We're confident we have the right solution to make you more competitive and increase your market share.
