

Australia's leading marketplace for environmental monitoring technologies and services

## HydroTerra assists wastewater site operators with their operations, management and monitoring requirements helping save time and money.

### We offer peace of mind to the wastewater sector by providing:

- Technology support and advice on the best monitoring technologies
- Trusted environmental monitoring from planning and managing through to collecting, reporting and visualising accurate data
- Innovative monitoring and control systems design, installation, integration & operation

### We provide high quality data to support the:

- Automation of operational and environmental compliance
- Reuse of recycled water
- Optimisation of effluent irrigation
- Investigation of dam leakage and seepage

### Our broad technology offering is available for purchase or rent and includes:

- Design, installation and management of long-term monitoring systems
- DataStream™ integrated networks and bespoke reporting systems
- Sensor and telemetry hardware range
- Vast array of sampling technologies
- Laboratory analytical services
- Geophysical mapping technologies
- Time series data analysis
- Satellite data interpretation
- Spatial data analysis
- Irrigation optimisation applications

### We lead the environmental monitoring space in wastewater because of our:

- End-to-end service offering
- Access to a comprehensive range of monitoring technologies
- Experienced teams of applied scientists, engineers and technicians
- Mature quality systems including ISO 45001, ISO 9001 and ISO 14001 accreditations
